BSP Installation steps for NVIDIA Jetson board: (Important Note: Please backup your personal files before re-flashing BSP)

After you download the BSP file and put the file in a Linux PC, please refer to the steps below to re-flash BSP.

#### 1. Let the JETSON AGX Orin initiate recovery mode.

You have to keep pressing “Recovery” button and then power on the NVIDIA Jetson board to initiate recovery mode.

When connecting a NVIDIA Jetson board to a Linux PC via a MicroUSB to USB cable, you can check kernel messages with ``dmesg`` command in the Linux PC.

Once you see the similar messages as below, it means that the NVIDIA Jetson board is in the recovery mode.

```
[24685.229129] usb 1-7: Product: APX
```

```
[24685.229132] usb 1-7: Manufacturer: NVIDIA Corp
```

## 2. Using the commands below in the Linux PC to start re-flashing BSP.

### # sudo is required to extract BSP

```
$ sudo tar zxvf D315AO-R2.*.*.*.tar.gz
$ cd JetPack_*.*/Linux_for_Tegra
$ ./install.sh
```

## 5.0 Force Recovery Mode

MicroUSB Jetson platform port of D315 can be used to re-program NVIDIA® Jetson AGX Orin by using the other host system running NVIDIA Jetpack, as the procedure described below.

1. Before you start
  - Please make sure to use a Linux host PC with Ubuntu 18.04 or 20.04 operating system.
  - Please use a native setup (no virtual machine) installation file in the following steps.
  - You will also need a high-quality standard USB. Type A to micro-USB cable
  - Download installation file from AVermedia.
2. Connect carrier board to host PC
3. Connect the system to the Linux host PC. Please use a USB cable (micro-USB on the carrier board).
4. After connecting to the host PC powering up the system. The system will detect the host PC and automatically enter the flashing state (also called force recovery mode).
5. Check that the connection is established with the `lsusb` command. You should find one entry with Nvidia Corp. as highlighted below.
6. Flashing of system
  - Use the flash cmd script in the extracted bootloader folder to transfer the software into the Jetson compute module and flash it.
  - Please connect a monitor to the system. After the flashing process has completed the should automatically boot and show the Ubuntu desktop.
  - You now have a functioning system ready for your needs.
